

## Concat function - Combine text from two or more cells into one cell

- The CONCAT function combines the text from multiple ranges and/or strings, but it doesn't provide delimiter or IgnoreEmpty arguments.

### Syntax:

```
CONCAT(text1, [text2],...)
```

For example, =CONCAT("The", " ", "sun", " ", "will", " ", "come", " ", "up", " ", "tomorrow.") will return The sun will come up tomorrow.

### Exercise:

- In cell D1, type the following formula:

```
=CONCAT(A1, " ", B1, " is ", C1, " years old.")
```

Sample Data:

Column A	Column B	Column C
Muhammad	Ali	20

**Exercise:** Use the CONCAT function to combine the values in Column A and Column B into a single column, Col3, with a hyphen (-) in between.

Sample Data:

Column A	Column B
Muhammad	Ali
Muhammad	Hamza
Nasir	Ahmad

Output:

Column A	Column B	Column C
Muhammad	Ali	Muhammad Ali

Column A	Column B	Column C
Muhammad	Hamza	Muhammad Hamza
Nasir	Ahmad	Nasir Ahmad

**Exercise:** Write a formula using the CONCAT function to create a new column that contains the product name, quantity, and price, separated by a comma and a space, in the following format:

Product name, quantity, price

Sample Data:

product Name	quantity	price
Apple	100	5
Banana	200	4
Orange	300	3
