

POWER

Returns the result of a number raised to a power.

Syntax

```
POWER(number, power)
```

The POWER function syntax has the following arguments:

Number Required. The base number. It can be any real number. Power Required. The exponent to which the base number is raised.

```
=POWER(5,2)
```

Exercise 6: Power and Square Root

- In cell A1, enter a number, e.g., 4.
- In cell B1, calculate the square of the number using the formula `=A1^2`.
- In cell B2, calculate the square root of the number using the formula `=SQRT(A1)`.
